. During the week ending the 30th August, 1947 in India (excluding East Punjab and Delhi Province) and in the Indian States shown in this statement, the total number of deaths recorded in 164 towns having a population of 30,000 and over was 10,340. The mid-year estimated population of these towns was 20,243,654 and the death rate was 26·9 per thousand of the population. Births in the same towns numbered 13,977 giving a birth rate of 35·9 per thousand of the population. In India alone the corresponding birth and death rates were 36·3 and 27·0 per thousand of the population respectively.

(A) *India*.—The following towns returned a high death rate of 50 or over per thousand of the population.
